Nyloboard to Launch the New Generation of Building Products at West Coast Green 2008
Nyloboard's versatile board composed of recycled carpet, solves the problems of mold/mildew, termites, water damage and it is easy to use.

Covington, GA – September 2, 2008 – Nyloboard announced today that they will be launching their revolutionary board at West Coast Green in San Jose, September 25-27th. Environmentally minded individuals will have the opportunity to see this unique recycled board up close and discover how it is changing the building industry.

“We are excited to be a sponsor of West Coast Green and to be a part of the green innovation movement,” said John Tikalsky, President of Nyloboard, LLC. “With thoughts of our overflowing landfills, deforestation, and chemical and pesticide use polluting our waterways and slowly poisoning us, we developed, Nyloboard, a “better” board that addresses these environmental concerns. Nyloboard is composed of recycled nylon carpet fibers and synthetic VOC free resins. It is mold/mildew resistant and water and termite proof. Ultimately, less carpet ends up in our landfills, no forests are destroyed and we avoid the need for harsh pesticides and chemicals.”

Nyloboard is unique because it is green and it performs. Approved by Miami/Dade County, Florida– one of the most stringent building codes in the industry, Nyloboard is designed to replace wood based products. Conventional wood tools easily cut and shape it into whatever form the builder envisions. Nyloboard can be painted, laminated and veneered with a variety of coatings and finishes. Custom lengths, sizes and colors are also available. Garage doors, custom homes, furniture, shutters, columns and sound walls have all been designed using Nyloboard. According to John Tikalsky, President of Nyloboard, LLC, “Our goal is to educate the builder on the exceptional qualities of Nyloboard and then to challenge them with the question, *what can you build with it?*”

About West Coast Green:

West Coast Green will be held September 25-27th, 2008, at the San Jose McEnery Convention Center in San Jose, CA. Nobel Laureate Al Gore is the keynote speaker and over 100 presenters and 380 exhibitors and more than 14,000 attendees are anticipated. Attendees and exhibitors include industry leaders, green professionals and homeowners. This forward thinking group will come together to educate, share ideas and solutions to our environmental problems and find ways to integrate new green and healthy building products and technologies. For more information on the conference visit: www.westcoastgreen.com.
